ABOUT ME

As a front-end engineer, I have abundant experience working with JavaScript, React.js, TypeScript, and Next.js. I specialize in using React hooks to manage state and avoid the need for external libraries like Redux. With a deep understanding of both the theoretical and practical aspects of front-end development, I excel at creating visually stunning and highly functional user interfaces. My attention to detail and ability to communicate effectively with designers, developers, and other stakeholders make me an excellent team player.
